

# INTRODUCING THE MY-T-HAULER

Since 1994, family-owned Quality Products NorthWest, LLC has been designing and building marine equipment for recreational boaters and fishermen in the Pacific Northwest, Canada and Alaska. Their goal is to design and manufacture the safest, highest-quality shrimp and crab gear at an affordable price.

Manufacturer of the electric Safe-T-Puller and Safe-T-Hauler, the company has recently introduced a new product line called the My-T-Hauler. This unit is extremely quiet, fully O-ring sealed motor, oil-bath gear train, fast pulling and very versatile. It is based upon a three piece take-apart davit design for easy portability, installation and convenient stowage. Its UHMD sleeved joints makes davit positioning and dis-assembly silky smooth.

The My-T-Hauler is available in 100-, 150-, 200- and 250-pound capacities with line speeds of 150 and 210 feet per minute. Several mounting bracket options are available, including a bracket for use with a Scotty Downrigger Mount. Two gear ratios of 60:1 or 90:1 are available providing faster line speed or greater hauling capacity.

The company's flagship products, Safe-T-Puller and Safe-T-Hauler are simple, safe,

and easy to use, designed and engineered for the recreational and light-commercial shrimper, crabber and lobster fisherman. Normally used for hauling crab and shrimp gear, they are often used in diving operations such as geoduck and sea cucumber harvesting. The units are even used for Remote Underwater Vehicle scientific oceanographic research operations.

The Safe-T-Puller combines safety and convenience of powerful 12-volt electrical motors with the patented rubber-bonded Self-Grip sheave and Twist-O-Flex overhead mounting to provide easy line handling. The convenient 12-volt system eliminates hazards and dangers inherent in gasoline engine powered pot-pullers and messy, complex hydraulic units. It uses powerful Differential Planetary Reduction Gears for extraordinary pulling power. Gears are lubricated for life and have O-ring sealed motors. The product is offered in capacities of 100, 200 and

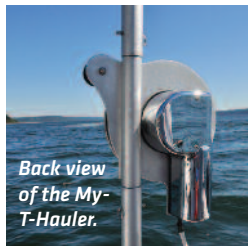

300 pounds with line pulling speed of 110 feet per minute. Multi-piece davits and several different mounting bracket options are available.

The unit is sold as a complete package or as special custom-designed systems with davits available in aluminum or stainless steel. Many Power-Head options and combinations are available. The Safe-T-Hauler's low mount design makes pot-hauling easier than ever before. Its swivel-mounted block allows line tracking with the pull direction and angle. The three-piece take-apart design makes installation easy, great portability and convenient, simple stowage. It is available in 100, 200 and 300 pound capacities with line speeds of 110 feet per minute.

Quality ProductsNorthWest, LLC, also offers other complimentary products and services such as custom davits, mounting brackets, electrical accessories, reversing switches, marine wiring and water-tight plug connectors, shrimp traps, crab traps and pot gear. All pot puller and hauler units are provided with a one-year warranty against material or workmanship defects.
