

## — Features & Benefits —

- ☑ **SelfGrip™** safety sheave provides hands-free, self-gripping operation eliminating possible injuries
- ☑ **Swivel-Flex™** The swivel mounted block allows the line to track with the pulling direction and angle when pulling from off side
- ☑ Compact, water resistant O-ring sealed electric motor and rugged differential planetary gear reduction provides higher line pulling power
- ☑ Put an end to dangerous, on-board gasoline storage and refueling spills forever
- ☑ Quiet operation, no gasoline engine exhaust fumes, no burned hands or arms, no need for ear-plugs
- ☑ Eliminate tune-ups and cranky, hard starting gas engines
- ☑ **SafeSwitch™** an air activated safety foot switch eliminates electrical hazards freeing both hands for pot handling
- ☑ Light weight, easy to store, easy to install, easy to transport and low maintenance
- ☑ High quality stainless steel and marine grade components used throughout
- ☑ 3 different weight capacities and powerheads available
- ☑ Complete with 3-piece **Take-Apart™** davit, mounting brackets, electrical connector and switch
- ☑ **Roller-Fairlead™** built in for ultimate pulling ease
- ☑ 90-day Material and Workmanship Warranty
- ☑ **Simply the BEST** — low-mount hauler on the market

# Safe~T~Hauler

*The highest quality, Low-Mount  
Electric Pot Hauler designed for safety  
and ease of operation  
Manufactured by*

**Quality Products NorthWest, LLC**

## ***Say Goodbye to Noisy, Smelly and Downright Dangerous Gas Engine Driven Pot Haulers!***

- ***Safe~T-Hauler™*** is the highest quality equipment designed for the recreational and light-commercial shrimper, crabber and lobster fisherman. It can be used as a gear hoist for diving operations such as goeduc or sea cucumber harvesting. **Tough, American made gear designed and built to take it!**
- ***Safe~T-Hauler™*** combines the convenience of 12 volt electrical power with the patented rubber bonded sheave and open swivel block to eliminate hazards and dangers inherent in gasoline engine powered pot haulers. Our patented ***SelfGrip™*** sheave design is the ultimate in safety and simplicity. The new sheave eliminates threading lines through complicated idler wheels and pulleys. Simply lay the line in the ***SelfGrip™*** safety sheave, around a roller and you are ready to pull! A slight downward pull seats the line between the rubber lined sheaves and pot pulling is nearly hands-free. This new product simplifies pot-hauling operations and provides a degree of safety not available with any other pot hauler.

### ***Safety First—Yet Easier Use!***

- ***Safe~T-Hauler™*** is simple and safe to use. **So safe it has been patented!** The low mount design makes hauling pots simple, safe and easier than ever before! The swivel mounted block allows the line to track with the pulling direction and angle.
- ***Safe~T-Hauler™*** is equipped with ***SafeSwitch™*** an air activated safety foot switch protecting the user from any electrical hazard while easily controlling the pot at all times. ***Roller-Fairlead™*** is an integral part of the ***Safe~T-Hauler™*** designed to control line pulling in heavy seas and adverse pot pulling conditions. The ***Roller-Fairlead™*** is standard equipment on all models.

## ***Quiet, Powerful Operation!***

- ***Safe~T-Hauler™*** uses a powerful 4-pole 12-volt Permanent Magnet DC electric motor providing more than ample *quiet* pot-pulling power. The electric motor draws a miserly 15–40 amps (depending on load, line diameter and battery condition.) Our light-commercial unit only draws 30–80 amps. Since a typical pot is pulled in only a few minutes, a 150 amp/hour marine battery provides up to 90 three-minute pulls without recharging! Enough battery power for all day pot hauling.

## ***Portable and Convenient!***

- ***Safe~T-Hauler™*** is available with a variety of davit mounting bracket configurations and electrical connectors to suit your boat installation. A convenient Stainless Steel lock-pin provides simple rotation into operating position or stowage position. The units are lightweight and portable making them easy to transport and store when not in use. Equipped with an aluminum davit, the sports model weighs a mere 31 pounds.
- ***Safe~T-Hauler™*** is convenient. Its power source is clean, efficient and safe 12 volt electricity. It is only necessary to make a few simple electrical connections to power up the pot hauler. Once installed, it's as easy as plugging it in!

## ***Environmentally Safe!***

Put away fears of gasoline spills and hydraulic leaks. Our electric pot hauler eliminates dangerous refueling while bouncing around on choppy water. Spilled gasoline is extremely flammable. **In a boat, it is an invitation to disaster!** Install a ***Safe~T-Hauler™*** today and you won't strain your shoulder trying to start your gas powered pot hauler. You also won't get a hernia lifting it on and off your boat. Count your fingers! Do you know that many people lose fingers or are severely injured every year while using unsafe equipment for pulling pots? **Say good-bye to unsafe, dangerous and back-breaking pot haulers forever!**

## ***Product Specifications***

### ***Davits:***

80" Overall Length, 1½" Schedule 40 Aluminum is standard. 80" by 1½" Schedule 80 Aluminum with light-commercial model. 304 Stainless available as special order option. Shorty, Skiff, 3-piece and custom davit configurations are optional. Several gunnel bracket, kick-plate and backing plate mount configurations are optional.

### ***Power-heads:***

Sports Model — 1.1 HP 12 Volt DC 15-40 Amp.  
Alaskan Sports Model — 1.6 HP 12 Volt DC 20-60 Amp.  
Light Commercial Model — 2.1 HP 12 Volt DC 30-80 Amp.

### ***Switches:***

Foot Operated Air Solenoid ***SafeSwitch™*** is standard equipment on all models.

### ***Capacities:***

Sports Model — 90-100 FPM hoists up to 100 lbs.  
Alaskan Sports Model — 100-110 FPM hoists up to 200 lbs.  
Light Commercial Model—110-120 FPM hoists up to 300 lbs.  
Line capacity ¼" to ¾" all models.

### ***Unit Weights:***

Sports Model — approximately 31 lbs.\*  
Alaskan Sports Model — approximately 33 lbs.\*  
Light Commercial Model — approximately 35 lbs.\*  
\*with Aluminum Davit

***Safe~T-Hauler™*** is protected under U.S. Patent No. 6,027,103.
